

Project Design Phase-II

Solution Requirements (Functional& Non-functional)

Date	15 October 2022
Team ID	PNT2022TMID00246
Project Name	Efficient Water quality analysis and Prediction using Machine learning
Team Lead	Bhavithra B
Team Members	Jenifer Mary Lazarus, Pavithra, Juliet
Maximum Marks	4 Marks

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	User registration	Registration through Gmail Create an account Follow the instructions
FR-2	User Confirmation	Confirmation via Email and it is predicted by water level sensor
FR-3	Interface sensor	Interface sensor and Water level sensor produces the detection of clean drinking water
FR-4	Accessing datasets	Datasets are collected by data preprocessing method.
FR-5	Mobile application	The efficiency of water quality is analyzed, the mobile application is not used.

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

FR No.	Non-Functional Requirement	Description
NFR-1	Usability	This project is useful for all human beings by predicting a purified water.
NFR-2	Security	We have designed this project to secure the people from drinking the impure water.
NFR-3	Reliability	This project will help everyone in protecting their health. Accurate water quality prediction is the basis of water environment management and is of great significance for water environment protection.
NFR-4	Performance	This system uses different sensors for monitoring the water quality by determining pH, Turbidity, conductivity and temperature. The data preprocessing accesses the dataset. With the use of this we predict the quality water.
NFR-5	Availability	By developing and deploying resilient hardware and software we can analyze the drinking water.
NFR-6	Scalability	This project is used to measure and determine the quality of water. This provides pollution-free and purified water.
